We will follow Method 5540C for the MBAS, as listed in the plan. I wanted to let you know that our RL is 0.025 mg/L which is below the level listed in the method; however, it's right at the lower end of past detections you mentioned on our call last week. When the first set of samples arrive, we will run lower standards to attempt to achieve a lower RL.

The memo was signed and plans are to be in the field next week with sampling beginning Tuesday. Is that okay with everyone?
